ADMINISTRATION REPORT

OF

IRRIGATION WORKS IN THE BOMBAY PRESIDENCY FOR 1915-16.

I.—GENERAL.

A.—DETAILS OF DIRECT EXPENDITURE.

In the year 1915-16 the direct expenditure (excluding collection charges) on all the Irrigation Works throughout the Presidency amounted to Rs. 86¾ lákhs compared with Rs. 96⅔ lákhs in the previous year, and Rs. 91 lákhs, the average of the last three years. The total is classified and divided between the Presidency proper and Sind as follows :—

	Deccan and Gujarát.	Sind.	Total.
	Rs.	Rs.	Rs.
Works	33,95,324	6,56,265	40,51,589
Repairs	4,85,910	22,50,155	27,36,065
Establishment*	9,43,305	8,51,547	17,94,852
Tools and Plant	49,350	43,834	93,184
Refunds of Revenue	19,455	.....	19,455
Gratuitous Relief	.....	.....	.....
Suspense Account	—15,842	586	—15,256
Receipts on Capital Accounts	—3,119	.....	—3,119
Total ...	48,74,383	38,02,387	86,76,770

2. The distribution of the above expenditure under Major heads of Accounts is given below :—

Heads.		Amount.	Remarks.
	Rs.	Rs.	
Capital Account—			
Major Works—			
Protective Works	... (a) 36,59,409		
Productive Works	... 2,77,576		
		39,36,985	Imperial
Minor Works and Navigation—			
Works for which Capital and Revenue Accounts are kept	... .	1,76,670	Half Imperial and half Provincial.
Revenue Account—			
Major Works—			
Protective Works	... 3,24,828		
Productive Works	... 12,54,435		
		15,79,263	Do.
Minor Works and Navigation—			
Works for which Capital and Revenue Accounts are kept	... 5,91,637		
Works for which only Revenue Accounts are kept	... 11,18,024		
		17,09,661	Do.
Works for which neither Capital nor Revenue Accounts are kept—			
Agricultural Works	... 11,95,085		Do.
Contribution Works	... 40,589		Deposit contribution.
		12,35,674	
Construction of Protective Works	... .	38,517	Imperial.
Famine Relief outlay on Irrigation Works ...	... .	.....	
	Grand Total ...	86,76,770	

(a) Includes expenditure in England, Rs. 15,136.

B.—FIGURES FOR CAPITAL WORKS ONLY.

3. The receipts on Capital Irrigation Works alone compared with the year's expenditure show a profit of Rs. 30,75,755 in Sind and a loss of Rs. 29,47,490 in the Deccan and Gujarát :—

Class of works.		Direct Receipts.	Indirect Receipts.	Total Direct and Indirect Receipts.	Direct expenditure.		
					Capital.	Working expenses (including the share of collection charges).	Total.
		Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Major Irrigation works	Deccan and Gujarát.	14,26,676	4,109	14,30,785	38,25,467	6,08,307	44,33,774
	Sind	1,87,703	30,42,422	32,30,125	2,77,576	11,80,867	14,58,443
Minor Irrigation works for which Capital and Revenue Accounts are kept.	Deccan and Gujarát	1,69,433	3,302	1,72,735	10,612	1,06,624	1,17,236
	Sind	74,983	18,32,648	19,07,631	.....	6,03,558	6,03,558
Total Deccan and Gujarát ...		15,96,109	7,411	16,03,520	38,36,079	7,14,931	45,51,010
Total Sind ...		2,62,686	48,75,070	51,37,756	2,77,576	17,84,425	20,62,001
Grand Total, Deccan and Gujarát and Sind, 1915-16		18,58,795	48,82,481	67,41,276	41,13,655	24,99,356	66,13,011
Grand Total, average of last three years ...		18,66,632	44,05,068	62,71,700	40,75,250	24,56,679	65,31,929

4. The area under irrigation showed, on the whole, an increase of 2·6 per cent. only on the average of the last three years; there was, however, large decrease in the Deccan due to seasonable rainfall, which was counterbalanced by the increase in Sind. These areas and estimated value of the crops grown are contrasted in the following statement :—

Capital Works.	Area.			Value.		
	1915-16.	Average of 3 years ending 1914-15.	Difference.	1915-16.	Average of 3 years ending 1914-15.	Difference.
	Acres.	Acres.	Acres.	Rs.	Rs.	Rs.
Major Works—						
Deccan and Gujarát ...	107,746	149,287	−41,541	1,35,57,330	1,23,27,448	12,29,882
Sind	1,368,183	1,291,225	76,958	3,23,93,944	3,32,19,662	−8,25,718
Total ...	1,475,929	1,440,512	35,417	4,59,51,274	4,55,47,110	4,04,164

Grand Total ...	2,460,570	2,398,279	62,291	7,04,88,631	6,94,83,145	10,05,486

NOTE.—For further details see Statements III-E and IV-E of Statistical part of Irrigation Administration Report.

C.—FIGURES FOR OTHER THAN CAPITAL WORKS.

5. These may be works for which only Revenue Accounts are kept, or works for which neither Capital nor Revenue Accounts are kept. The former are termed Second Class Irrigation Works in the Presidency (excluding Sind). The receipts on these works are principally in the form of a share of the Land Revenue and are termed "Indirect" and as such are book credits, so that figures of revenue appearing in the Finance Accounts, as distinguished from the Statistical Statements accompanying the Irrigation Administration

Report, are very small, being for direct revenue only, *viz.*, proceeds from sale of water, etc. The area of irrigation on these very numerous works is always large, but it fluctuates to some extent with the seasons. The following statements give a comparison of this year's and the average of the last three years' figures :—

Class of works.	Revenue.			Expenditure.	Net Revenue.
	Direct.	Indirect.	Total.		
MINOR WORKS.	Rs.	Rs.	Rs.	Rs.	Rs.
Works for which only Revenue Accounts are kept. Deccan and Gujarát	10,321	5,16,317	5,26,638	3,29,484	1,97,154
Works for which only Revenue Accounts are kept. Sind	57,614	25,27,109	25,84,723	9,90,936	15,93,787
Total for 1915-16 ...	67,935	30,43,426	31,11,361	13,20,420	17,90,941
Average total for triennium ending 1914-15 ...	83,043	30,72,412	31,55,455	14,65,097	16,90,358
Works for which neither Capital nor Revenue Accounts are kept. Deccan and Gujarát	9,805	.....	9,805	56,602	-46,797
Works for which neither Capital nor Revenue Accounts are kept. Sind	14,479	9,47,027	9,61,506	12,25,790	-2,64,284
Total for 1915-16 ...	24,284	9,47,027	9,71,311	12,82,392	-3,11,081
Average total for triennium ending 1914-15 ...	23,556	9,50,657	9,74,213	14,83,890	-5,09,677
Grand Total for 1915-16 ...	92,219	39,90,453	40,82,672	26,02,812	14,79,860

NOTE.—In this report whenever the average is referred to, it is the average of the last three years, unless otherwise defined.

Class of works.	Area.			Value of crops.		
	1915-16.	Average of triennium ending 1914-15.	Difference.	1915-16.	Average of triennium ending 1914-15.	Difference.
	Acres.	Acres.	Acres.	Rs.	Rs.	Rs.

D.—REVIEW OF IRRIGATION.

Description of irrigation.

6. In Sind, the rainfall is usually negligible and the cultivation depends almost entirely on canal irrigation. The canals depend for their supply on the inundation of the river Indus.

7. In the Deccan and Gujarát, cultivation being mainly dependent on rainfall, the tanks and canals are useful to counteract the evil effects of a deficient rainfall. The irrigation schemes in this part of the country involve the construction of storage reservoirs and are costly, compared with those in Sind.

Inundation and rainfall in Sind.

8. The inundation of 1915 was on the whole an exceptionally low one; the rainfall was also scanty; the only way to ward off disaster was, therefore, to resort to a very rigid

system of rotation and it was done with great success and consequently, in spite of the low river level and insufficient supplies in some of the canals, the year was not by any means a bad one.

Rainfall in the Deccan and Gujarát.

9. In Gujarát the rainfall during the year was much below the average, but in the Deccan it was more favourable and consequently there was less demand for water.

Area and cost.

10. The area irrigated in Sind was over 3 million acres which is equal to about a quarter of the culturable area of the Province and the gross revenue was nearly 87 lákhs of rupees, while the capital expenditure to date on irrigation works has been Rs. 324 lákhs.

11. In the Deccan and Gujarát, the total area irrigated was 282,000 acres only out of 27½ million acres of culturable land and the revenue from all sources was over 21¼ lákhs of rupees. For these works the capital cost up to date has been over 593 lákhs. The gross return per acre is always much greater in the Deccan than in Sind, but the return on capital expenditure is less than in Sind.

II.—SIND.

1.—NATURE OF INUNDATION AND RAINFALL.

Character of Inundation.

12. The inundation of 1915 was, on the whole, an exceptionally low one and resembled the inundations for the years 1898, 1902 and 1907 as being one of the lowest on record. A peculiar feature of the year was an unusually high river at the commencement of the season, giving promise of a very favourable inundation which, however, was far from realized.

13. The river began to rise in May and, with several fluctuations, reached a maximum of 12·7 feet on the Bukkur gauge on the 26th August. Readings of 12 feet and over were recorded on this gauge for five days only and the water never reached the "fair irrigating level" of 13 feet whereas this level was reached for a period of 45 days in the previous year and 16 days in the year 1913.

14. At Kotri the river is now consistently higher than in former days. The "fair irrigating level" of 17 feet on the Kotri gauge was recorded on the 20th May, but the flow soon began to diminish and after some fluctuations the level fell to 14·9 on 3rd July 1915. After this the river began to rise fairly steadily until 19·6 was recorded on 31st August. Readings of 17 feet and over were recorded for 65 days as against 100 days in the previous year and 66 in the year 1913.

Rainfall.

15. During the year there was only a scanty rainfall and the kharif crops therefore got little help from this source. Rotation and other measures, however, were resorted to, which considerably improved matters, and averted what would otherwise have been a disastrous year for agriculture.

2.—INDUS RIGHT BANK DIVISION.

(i)—WORKS FOR WHICH CAPITAL AND REVENUE ACCOUNTS ARE KEPT.

Desert Canal.

16. This canal on the northern frontier of Sind had on the whole a very good supply but rotation had to be introduced to supply wants at the tails of the branch channels. Though the full supply gauge reading was only obtained on 5 days the full designed discharge of 2,750 cusecs flowed on 48 days.

17. The new cut made from the Desert Canal to supply the Adiowah was unfortunately an unqualified failure and its designed depth of 5 feet of water was never obtained.

Unhárwah.

18. The Unhárwah was opened on 1st June as usual, and the supply was satisfactory throughout. The designed full discharge flowed on 35 days, though the full supply level was actually recorded for only 8 days. Irrigation was above the average. There is still a somewhat inadequate supply at the tail due to certain karias between miles 17 and 33 drawing off much more water than they are entitled to.

19. The branches except Ghauspur and Khanwáh worked satisfactorily.

Begari Canal.

20. This, the most important of systems north of Sukkur, had an excellent supply. The canal flowed full for 16 days.

21. Some deficiency was experienced in the karias taking off directly from the main canal between miles 19 and 31, but all the branch canals worked excellently with the exception of the newly constructed Choi Branch which had an average discharge.

22. Two big breaches occurred in the tail portion of the Begari Canal at miles 74/1 and 75/3. These were closed with the help of zemindars and no serious damage was done.

Mahiwah.

23. The Mahiwah is the largest canal on the right bank above Rohri and is fed by the Gudu Dhand. The set of the river was on the left bank, so the Mahiwah had a poor supply but with timely and judicious rotations it worked satisfactorily. The Mahiwah project is incomplete, but the works remaining to be done (1) widening the Mahiwah main canal, (2) sluice at head of Khambra distributary, (3) road culvert in Khambra distributary at mile 1/3, have been abandoned, and the construction of Mirkosh branch has not yet been begun.

24. On the Sukkur Canal the northern mouth, the Rahuja head, was opened on the 25th May 1915 with 10 feet at Bukkur but owing to heavy erosion above the feeder dhoro this mouth was soon blocked with silt varying from 6′ to 8′ deep and the dhoro ceased to flow on the 5th June. As it was not advisable to open the old Sukkur head at that time a new cut had to be made as expeditiously as possible. A suitable place was found, and a new cut was promptly made from the river bank 1,200 feet in length, 2 feet in depth and 20 feet in width. This was completed in 5 days, and when water was let in it scoured a bit and acted so well that not the least deficiency of water was felt on the Sukkur Canal thereafter. Sukkur Canal.

25. To the south of Sukkur on the right bank the Ghar, which is one of the largest in Sind, was opened on the 21st of May with a gauge reading of 6′ at its head and 10′ on Bukkur gauge. The promise at the commencement of the season of a good supply caused a greater area of land to be brought under cultivation but the subsequent low river caused disappointment and this canal was the least satisfactory in the district. In addition to the low river level, the dhand at the head of the canal became unfavourably situated and part of it has silted up. It is proposed to remedy the defect during the current working season by putting an earthen dam across the tails of Ghar Dhand and Chach Dhoro and to construct some groynes on the left bank of the Ghar Dhand to narrow the section at the point where the canal takes off. Ghar Canal.

26. The Fordwah, on the other hand, which is feeder of the Ghar Canal, taking off from the Ford Dhand and meeting the Ghar Canal at its 25th mile, worked quite satisfactorily. The Ghar Canal and branches below the 25th mile, mostly, if not solely, depend for their water-supply upon this feeder. Even during the present low inundation, the branches, *viz.*, Naurang, Nurwah and Kur Dato, worked fairly satisfactorily.

27. On account of the heavy erosion of the river, the Chach Dhoro, feeding the Ford Dhand, was eroded and the current of the river is such that erosion will probably continue, and it is proposed to make a fresh cut from Chach Dhoro to tail into the Ford Dhand sufficiently far away from the action of the river.

28. The Sattah, in the extreme south of Sind on the left bank of the Indus, derives its supply from a "Kohri" which is fed from the river by an artificial cut where heavy clearance is necessary every year. The supply was, on the whole, sufficient and the wastage of water in low lands has been curtailed by the reduction of karia sluices in the first 12 miles. Sattah Canal.

(ii)—Works for which only Revenue Accounts are kept.

29. The principal canals under this head are the Sind, Western Nára, Pinyari, Kalri and Baghar Canals.

30. The Sind Canal, taking off from the Indus between the Begari and Sukkur Canals, was favourably placed for the set of the river and had an excellent supply throughout the season: in fact regulation was necessary to prevent breaches. Most of the lift lands got flow water. In order to improve the supply for lands between miles 2 and 4 a cross regulator at mile 5 may be necessary. The big karia Mirwah, taking off the tail of the Sind canal, has hitherto been controlled by zemindars, its section was irregular and proper clearance was never done. Also influential zemindars interfered with the proper distribution of water and the cultivation suffered, with the result that the remissions were heavy. This karia has therefore been taken over by Government and was remodelled during the year under report. Sind Canal.

31. The large Western Nára system is south of the Ghar Canal on the right bank of the Indus. It was opened with 4 feet of water on 12th May with 8·5 on the Bukkur gauge. Except in the upper reaches of the canal, the supply was generally insufficient and rotation and other aids had to be resorted to; these resulted in a fair outturn. The improvements mentioned last year have not yet been carried out. Western Nára.

32. The new feeder takes off from the Kambrani Dhand and enters the Nára at mile 32/3. It silted heavily and did not discharge its functions properly. To remedy this, its tail has been diverted to about a mile further downstream meeting the Nára after the latter has emptied some 800 cusecs into the Dhamrao. The result of this will be watched in the abkalani of 1916.

33. The Pritchard Canal is the second feeder to the Western Nára, and the new mouth to this canal worked well except that it brought in a lot of silt. The cultivation on the Pritchard Canal itself decreased as the lands on it are highly placed.

34. This canal is a little south of Jherruck but on the left bank, and is the chief source of supply to the Pinyari, Sujawal and Shah Bunder Sub-Divisions on the left bank of the Indus. Pinyari.

35. The supply in the main canal fluctuated considerably throughout the season and rotations were resorted to at its regulators almost continuously; these proved most beneficial. The local prejudice against rotation, as being disastrous to the rice crop, was successfully disproved and the outturn of crops averaged 12 annas, a most satisfactory result, considering the state of the river.

Kalri.

36. The Kalri Canal takes off from the right bank of the river Indus north of Tatta and runs south-west through the Tatta Táluka and tails into the Mirpur Sakro Táluka. The canal with its branches worked very satisfactorily. Certain proposals for improving the water-supply in the lower part of the Kalri are still under consideration.

Baghar.

37. The Baghar is one of the deltaic mouths of the river Indus and takes off from right bank of the river south of the town of Tatta. It runs through the Baghar Sub-Division and tails into the sea through the Shisha creek. It started to flow on 9th April, having no head regulator, but suffered from deficiency due to the fluctuating inundation, and as there are no means of regulation along this canal only the lowest lying lands could be irrigated this year, and very large tracts dependent on this canal suffered considerably.

Unfinished works.

38. The following are the principal original works under this head which were either commenced during the year under report or in the previous year but still in progress :—

	Expenditure during 1915-16.
	Rs.
(1) Taking over zemindari karia Mirwah *ex*-tail of Sind Canal and remodelling it	6,251
(2) Providing pitching in the bed of Colonel Fife's Channel below head regulator	1,673
(3) Constructing a head regulator on the Phitta Canal at mile 3/2	6,717
(4) Constructing a head regulator over the Chario Wahur Canal	10,479
(5) Improvements to Dhamrao Canal *ex*-Western Nára ...	526
(6) Providing drainage channel for deh Karampur and Araro, táluka Mirpur Bathoro	3,600

39. In the Shikarpur Canals District the cultivation on the left bank north of Rohri which is dependent on floods was considerably less than that of the previous years. The absence of rainfall combined with low river level caused much harm to kharif cultivation, and the absence of the usual floods has made matters worse as there is very little return from bosi rabi.

Karia Heads.

40. Throughout the year the policy of doing away with unnecessary karia heads, and having permanent sluices of correct size built, wherever possible, was steadily and systematically pursued on all canals.

3. INDUS LEFT BANK DIVISION.

(i)—Works for which Capital and Revenue Accounts are kept.

41. The canals in the Indus Left Bank Division fall under two groups, *viz.* (*a*) the Eastern Nára System and (*b*) canals taking off direct from the Indus.

42. Under (*a*) are the Nára River, the Jamrao, Mithrao, Khipro, Thar and Hiral canals, of which the Khipro canal flows during the inundation only, the others being perennial. The Thar, though classed as perennial, is closed on or about the 1st December each year to save the country round about from being waterlogged.

43. Under (*b*) are the Dad, Nasrat, Fuleli, Hasanali and a large number of smaller canals, all being classed as inundation canals though the Fuleli receives a fair rabi supply.

(*a*) *Canals taking off from the Eastern Nára.*

Nára Supply Channel.

44. This is an artificial channel 12 miles in length taking off the river on its left bank above Rohri and forming the mouth to the Nára, an ancient course of the Indus. As the year's inundation was exceptionally low, no regulation at the head of the Supply Channel was required and, due to the absence of Ghotki floods, there was no silting. In spite of the low river the channel discharge was good and there was a complete absence of the difficulties experienced during the previous year's abkalani* of keeping the head regulator and railway bridge free of the usual accumulation of rubbish.

* Flood season.

45. The Ghotki Flood Diversion bund or protective embankment mentioned in last year's report was commenced and the first thirteen miles of its length have been completed at a cost of approximately 1½ lákhs rupees. This bund will be eventually 29 miles long and should be wholly completed in the coming year.

The Nára.

46. The Nára, from the end of the Supply Channel to the Jamrao, is about 96 miles and from the Jamrao to the Thar weir about 100 miles in length. The Nára commands over 500,000 acres of culturable land. Figures of cultivation are available only for the portion in the Eastern Nára District. The area cultivated during the year on the Nára in this district was somewhat less than the average of the previous three years.

47. From the Jamrao weir to the Khipro canal the bed of the Nára River is in fairly good order. The silt which had accumulated below the Makhi regulator is gradually being

scoured away by the extension of the banks, confining the Nára to its proper channel. These banks have been extended to nearly 8 miles and, as funds permit, should be extended up to Chotiari, a total distance of about 14 miles, in order to remove completely the silting trouble below the Makhi regulator.

48. The Jamrao is gradually regaining its high area of irrigation as the supply from the Nára has been steadier in recent years. Jamrao Canal.

49. The condition of the river at the head-works remains satisfactory. Both the channel approaching the weir and tail channel have maintained a good section, and the previous year's erosion at the upstream end of the island above the weir has been practically arrested. There has consequently been no heavy silt deposit at the head regulator.

50. The abnormally low river level in the rabi season did not permit of scouring out the silt in the first 7 miles of the main canal, and the canal bed below the 7th mile falls has now practically silted up to the crest of the fall. In order to get down the full kharif discharge the groynes which have acted so well in producing a regular channel are being set back to give a width of 175 feet (the width now averages 150'). Failing a suitable scour, as a result of this measure, a resort to manual labour will be necessary at considerable expense.

51. The area cultivated during the year on this canal was well above the average of the previous three years. The increase in cultivation was in the rabi crops, and the area under cotton decreased due to the low price of cotton in war time.

52. An allotment of new land to the extent of 7,842 acres was made, of which Punjab colonists received nearly one-half.

53. Thirty miles south of the Jamrao head-works, the Mithrao takes off from the Nára above the Makhi weir. The supply was only moderate and the deficiency in the reaches below the 57th mile was overcome by a further adjustment of the sluices and the careful control at the various canal regulators. Mithrao Canal.

54. The new 30th and 45th mile distributaries will come into operation in the kharif season of 1916 but the construction of the new Makhi Distributaries has been postponed for lack of funds. Some time will therefore elapse before the extravagant supply of water now drawn off by so many karias can be put a stop to.

55. The area cultivated was well in excess of the average of the previous three years.

56. Owing to the soil in the Hiral tract being 'kalar' and some of the land having become waterlogged, rice cultivation has been temporarily permitted on this canal for two years, 1915-16 and 1916-17. The water-supply was sufficient, but the irrigated area was slightly less than average. Hiral Canal.

57. New grants and the restoration of 638 acres were balanced by a fresh forfeit of 1,224 acres.

58. Rotation was resorted to for nearly five months on the Thar and the area irrigated was a little below the average. Thar Canal.

59. The supply in this canal is precarious as there is no regulator on the Nára where it takes off. A project to make this a branch of the Mithrao and give it a supply from above the 9th mile regulator has been sanctioned, but work cannot be commenced while the present unfavourable financial conditions prevail. Khipro Canal.

60. Very careful management resulted in cultivation somewhat above the average.

(*b*) *Canals taking off direct from the Indus.*

61. Rotations on this canal enabled the water-supply to suffice for the cultivation of nearly the average area and this was in spite of heavy erosion above the mouth of the Lundi dhand feeding the Nasrat which caused silt to accumulate to a depth of 4 feet at the head of the dhand. The Nasrat, consequently, stopped flowing early in the season and the attempts made to remove the silt by means of the dredger Mudlark did not meet with success. The canal flowed from 8th May till 21st September. As the erosion above the mouth of the Lundi dhand continued after the abkalani, the dhand had to be abandoned and a new feeder, direct from the river, has been excavated some 10 miles downstream of the mouth of the Lundi dhand to serve as a feeder to the Nasrat Canal. Nasrat Canal.

62. The total expenditure on the construction of the karias and kasis has been Rs. 2,88,860 and the recoveries from colonists Rs. 2,96,026.

63. An allotment of 1,456 acres of land was made on this canal during the year.

64. In spite of the low inundation careful and judicious rotations at intermediate regulators prevented any great reduction in cultivation on the Dad Canal. Erosion by the Indus above the Dad Head caused some silting early in the season but a change of the river course in August scoured this away and no harm was done. The canal flowed from 12th May till 12th December. Dad Canal.

65. The total expenditure on the construction of the karias and kasis amounts to Rs. 1,32,574, of which Rs. 1,31,060 have been recovered from the zemindars.

66. New land to the extent of 1,086 acres was allotted during the year.

67. The Ren distributary is fed by the Dad Canal and irrigation was fair. New land to the extent of 7,209 acres was allotted to colonists.

Fuleli Canal.

68. The abnormally low river did not materially affect this canal, which takes off from the river close to Hyderabad. The canal obtained its supply through the original mouth, which, previous to 1912, had given an excellent supply for 40 years or so without any change. Full supply at the Jamshora regulator was not recorded till August 25th, but at the tail, full supply was obtained from July 28th onwards. The rabi supply was also sufficient although the river was 2 feet below the 10 years' average throughout the season. There was some difficulty with the old Fuleli channel due to silting, but the lower mouth is now clear and will give a good discharge next year.

69. The area cultivated during the year was about 385,000 acres just under the average.

Hasanali Canal.

70. This canal below Kotri worked satisfactorily. The Rajwah branch on which sluices were constructed in 1913, worked better, and with a still further reduction of the sluices, the supply at the tail will be assured.

71. The area under cultivation was equal to the average.

Canals in the Hyderabad Canals District.

72. All the canals in the Hyderabad canals District worked fairly satisfactorily and the damage done to canal banks was trifling owing to the low river level. The want of head regulators, by which the water-supply can be controlled, causes considerable damage to such canals in years of high floods. The construction of a regulator over the Great Marak, the most important of these canals, has been administratively approved by Government and the work will be started as soon as possible.

73. The cultivation, this year, in the whole of the Hyderabad Canals District, will be about 253,500 acres against an average of 290,818 acres.

(ii) WORKS FOR WHICH ONLY REVENUE ACCOUNTS ARE KEPT.

74. The principal canals under this head are the Naulakhi, Mehrab, and Dambhro in the Nasrat Canals District and Ren, Gharo Mahmudo, Kari Shumali and Nasir in the Hyderabad Canals District.

75. These were all well supplied. The new cut to Naulakhi excavated just before the abkalani was satisfactory, but the early cessation of flow in the Lundi dhand caused some deficiency on the Mehrabwah. The new cut to Gharo Mahmudo ex: mile 3 of the Sangrowah, excavated in 1913-14, also worked well, and a bridge was constructed across it.

4.—PROTECTIVE EMBANKMENTS.

76. Although the maximum gauge reading at Bukkur during the year was 12·7 against 17·4 in 1914, the water level against the Kashmor bund was only 2 feet lower than in 1914. Erosion took place all through the abkalani at and below Unhárwah mouth (from mile 9/4 to 10/4) and in the neighbourhood of Begari mouth (from mile 4/3 to 5/2). Hill torrents caused a breach at the northern end of the bund but no serious damage was done.

77. No breaches occurred due to Indus floods. The Tori, Haibat, Unharwah and Gouspur loops were successfully wetted by water pumped into the trenches before the floods came against them.

78. In the Shikarpur Canals District, owing to the low inundation, water did not touch the Kasimpur bund (left bank) nor the Sukkur Begari bund (right bank of Indus) beyond its 21st mile.

79. The important original works carried out and in progress in this District during the year were :—

(1) Constructing a sluice in the Choi loop near mile 28 of Sukkur Begari bund.

(2) Converting the existing seven submerged sluices, constructed over forest karias *ex*-Masoowah to irrigate Wasir forest, into open sluices.

(3) Raising to full bund section the right bank of Colonel Fife's Channel along its length between the front Sukkur Begari bund and Adurtakio loop.

80. In the Ghar Canals District the bunds were in good condition. Water touched a portion of the Mithu Phulu and loop bunds 10 miles 5 furlongs and 3 miles 6 furlongs where there is low ground, when the Bukkur gauge reading was 12·7.

81. In the Western Nára District the total length of the Western Nára bunds is 80 miles 6 furlongs, beginning from Abad and ending on the right bank of the Phittawah. These are being extended to Sehwan in a length of 21 miles and an outlay of Rs. 78,071

was incurred upto 31st March 1916. The maximum depth of water against the Manjhand bunds was 4·4 at mile 5 on the 28th August. No leak or breach occurred any where.

82. In the Karachi Canals District, the river bunds run along both banks of the river Indus for 52 miles on the right bank and 94 miles on the left bank.

83. All the bunds are now raised to a free board of 4 feet above the High Flood Level of 1912, which is equivalent to a free board of 3 feet above the High Flood Level of 1914. They are in good order and have scarcely been touched by the river this year.

84. There has been no abnormally active river erosion but the river at Belo approached to within 174 feet of the bund and consequently a retired loop bund has been constructed from mile 31/2 to 32/4 in the Mulchand Shahbunder bund behind Belo on which Rs. 16,002 were spent. A loop bund behind miles 9/4 to 10/3 of Kokawari bund has also been constructed on which Rs. 6,491 were spent during the year.

85. None of the river bunds in the Left Bank Division had any appreciable depth of water against them.

5.—INDUS RIVER COMMISSION.

86. The works executed and surveys carried out were charged to "43-Irrigation Minor Works and Navigation—Agricultural Works—Works for which neither Capital nor Revenue Accounts are kept". Indus River Commission Works and their classification.

87. The usual topographical surveys of the Indus, dhands and bunds, etc., were made and aggregated 2,298 miles in length. Survey of the Indus.

88. The whole course of the Indus from Rojhan in the Punjab down to the bifurcation, 543 miles, the Haideri 36 miles, and the Ochito 64 miles was surveyed and plotted.

89. The usual surveys for the "Central passage of the Indus" were carried out.

90. The Khairpur Boundary rails, 82 in number, were inspected and six range lines Nos. 30, 31, 32, 33, 34 and 35 were checked. Khairpur Boundary Rails.

91. Gauge readings of the river were taken daily at 10 stations, twice a week at 4 stations and weekly at 9 stations. River Gauges.

92. Discharge observations were continued at Sukkur and Kotri, and observations were made for the velocity at various depths on the silt in suspension and sand waves or the movements of the bed of the river. The results will be published in the Indus River Records. The discharge at Sukkur during the inundation and the minimum discharge of the year, compared with the results of previous years, are as follows :— Scientific Work and discharges of the Indus.

Month.	1911-12.	1912-13.	1913-14.	1914-15.	1915-16.
	C. ft.	C. ft.	C. ft.	C. ft.	C. ft.
June	13,325,000	8,138,000	8,432,000	7,401,000	8,925,000
July	11,725,000	16,227,000	10,586,000	21,453,000	10,756,000
August	10,916,000	17,275,000	13,377,000	18,359,000	11,834,000
September	9,050,000	7,034,000	7,670,000	13,863,000	7,083,000
Total * ...	45,016,000	48,674,000	40,065,000	61,076,000	38,598,000
Average discharge ...Cusecs...	368,984	398,967	328,402	500,623	316,377
Maximum discharge ...Cusecs...	582,742	721,256	621,156	948,728	430,445
Minimum discharge June to September ...Cusecs...	211,089	105,230	108,513	176,894	134,888
Minimum discharge observed throughout the year ... ...Cusecs...	35,311	23,730	23,719	40,664	25,546

*Note.**—These totals and their constituent figures are the sums of the daily observations of the Indus in cusecs. To arrive at its total discharge during the period concerned, the figures given in the table must be multiplied by 86,400 (the number of seconds in a day).

93. The discharge observations at Mithankot above and below the junction of the Chenab with the Indus were continued this year. The minimum discharge was 21,132 and 32,596 cusecs respectively.

Extensions and Improvements and Special Repairs.

94. The estimated cost of the works under these heads sanctioned during 1915-16 by the Indus River Commission for execution by Executive Engineers and by the Commission is given below :—

District.	Extensions and Improvements.	Special Repairs.	Total.
	Rs.	Rs.	Rs.
A.—Indus Right Bank Division.			
Shikarpur Canals	6,922	14,837	21,759
Western Nára	2,03,061	.....	2,03,061
Karachi Canals	3,288	40,895	44,183
Total ...	2,13,271	55,732	2,69,003
B.—Indus Left Bank Division.			
Nasrat Canals	114	.....	114
C.—Indus River Commission.			
Works under the direct control of the Indus River Commission ...	25	.....	25
Grand Total ...	2,13,410	55,732	2,69,142

Maintenance and Repairs.

95. The total expenditure under this head on the several works under the direct control of the Indus River Commission was Rs. 23,105, of which Rs. 2,247 were spent on the River Gauge establishment at Sukkur, Kotri, Jherruck, Khairabad (Punjab) and the Indus Delta.

Total expenditure.

96. The total expenditure incurred and accounted for by the Indus River Commission was :—

	Rs.
Works	32,064
Repairs	23,105
Establishment	1,03,422
Tools and Plant	5,886
Total ...	1,64,477

Snagging operations.

97. The snagging of the Indus and the Eastern Nára was not carried out this year for want of funds on account of war.

Erosion.

98. Heavy erosion occurred at mile 4/7 of the Kashmor bund and at miles 11/0 and 30/4 of the Sukkur Begari bund, the maximum rate of the erosion being 487 feet, 400 feet and 400 feet per week respectively.

Dredger " Mudlark."

99. No clearance work was done this year by the dredger " Mudlark ".

Sukkur Barrage.

100. A separate district has been sanctioned for the preparation of the new Barrage Project, which is to include a large canal both on the right and on the left bank of the river. The barrage is to be placed just below Sukkur, and the designs and estimates have been commenced.

6.—MISCELLANEOUS.

101. In the Karachi Canals District all the nurseries and gardens were kept in good condition and endeavour is being made by the Executive Engineer to extend the plantation of trees along canals and bunds. Tree planting along canals was pushed on vigorously throughout the Begari Canals District and in the Ghar Canals District new nurseries have been started in some of the Inspection Bungalow compounds and are doing very well.

102. In the Left Bank Division the existing plantation on canals and bunds was maintained and a large number of new trees were planted and are thriving.

Irrigation of cotton crops.

103. No Egyptian cotton was grown this year.

104. The following table shows certain details regarding the watering of indigenous cotton crops :—

District.	Lift lands.		Flow lands.		Date of last watering varied from to
	Number of waterings.	Intervals between.	Number of waterings.	Intervals between.	
Nasrat Canals	6 to 9	10 to 16 days.	5	15 to 24 days.	10th to 25th September.
Hyderabad Canals... ...	3 to 7	.....	.....	.....	9th to 26th September.
Fuleli Canals	7 to 9	10 to 25 days.	7 to 9	10 to 25 days.	4th to 12th October.
Eastern Nára	3 to 5	.....	3 to 5	.....	18th August to 14th October.
Jamrao Canal	6 to 12	.....	5 to 12	.....	9th October to 18th December.

III.—DECCAN AND GUJARAT.

1.—NORTHERN DIVISION.

105. No relief was required anywhere and special works were not opened but the ordinary works were expanded in certain distressed localities and the people in the neighbourhood, who were in need of work, were encouraged to go to the works at the ordinary rates of wages. General remarks.

106. In the Panch Mahals, even the smallest tanks proved useful, as the kharif maize crop was saved under them and afterwards the rabi crops were irrigated by the water accumulated by the rains in October. It would be thus apparent that by the restoration of tanks, large and small, some protection is afforded to the villages both for water-supply and irrigation in such years of scanty and fitful rainfall.

(i) FIRST CLASS IRRIGATION WORKS.

107. The rainfall gauged at Ahmedabad and Prantij during 1915-16 was 12·04 and 14·04 inches against an average of 29·00 and 30·20 inches respectively for the last 30 years including the year under report. This is less than half the average and led to a general failure of crops resulting in scarcity throughout the Northern part of Gujarat, though not actual famine. There was only one small flood in the Hathmati River on the 28th June when the water rose 1·50 feet above the weir crest. The canal was opened on 28th June and flowed till 24th August 1915 with an interruption of 5 days. Its maximum discharge was 350 cusecs on 28th June and the minimum 9 cusecs on 11th July. The supply available was utilized for irrigating the lands on the canal itself, the surplus water partially filling the Bokh Reservoir for subsequent use. When there appeared no probability of further rain falling in July water was let into the Khari River and diverted therefrom into the Khari Cut Canal at Raipur to fill the Chandola Tank to R. L. 134, storing about 34 million cubic feet, and half fill the Vasai Reservoir storing 20 million cubic feet, the remainder being utilized in filling the Gam Tanks at Chanindra, Navagam, Bareja, Jetalpur, Ashlali and Narol. The latter proved of great use for village water-supply as there was great scarcity of sweet water for drinking purposes everywhere especially for cattle. The water from the Bokh was let down early in the season with a view to lay bare the bed for cultivation if no more rain fell and to reduce loss on account of absorption and evaporation in transit in the Khari River which is generally very great in drought years. Both these objects were achieved and every drop of water was used to the best advantage and for the first time it may be noted that a trickle of water that could be obtained was made available for 3 or 4 of the most important Kalambandi villages at least for drinking purposes and the people were extremely satisfied with the result. The Hathmati Canal and the Khari system.

108. The special feature of the year was the low duty of water because the cultivation was scattered and the loss in transit was great.

109. The irrigation was only one-tenth of average on the Hathmati and Khari Cut.

110. There was no replenishment in the Wangroli, Tranza Nagrama and Saiat tanks. The Savli Tank supply was very small but it was utilized in irrigating the rabi crops, mainly wheat and gram, of 3 or 4 villages, 550 acres. The construction of the Balada high level canal from the Wangroli Tank has been commenced. Tanks in Kaira.

111. The Futelao Tank at Nani Kharaj in the Dohad Taluka of the Panch Mahals, originally a famine work, was completed. The kharif rainfall was scanty, but better rain fell in October and the tank filled partially, and irrigated 39 acres. A portion of the bed was also given out for cultivation. Futelao Tank.

(ii) SECOND CLASS IRRIGATION WORKS AND AGRICULTURAL WORKS.

Khari Sluices.

112. During the year there being no water in the river Khari at Pinglaj, there was no irrigation at all under the sluices. The Gam Tanks at Navagam, Chanindra, and Mewa Tank at Kathwada, in the Khari sluices, were, however, partially filled for drinking purposes.

Muwalia Tank.

113. The rainfall was only 13 inches during the four months June to September; but 8 inches falling in October partially filled the tank, enabling 743 acres to be irrigated, nearly double the previous average.

Old tanks.

114. Improvements to 144 and repairs to 72 small irrigation tanks in the Gujarat Irrigation District, and repairs to 10 such tanks in the Surat and Broach District were executed at a total cost of Rs. 72,405 and Rs. 35,466 respectively. In the Gujarat Irrigation District, repairs to 13 Talukdari tanks were in progress and the Government share of the expenditure was Rs. 929.

Drainage channels.

115. The drainage channels in the Surat and Broach and the Gujarat Irrigation Districts were maintained.

2.—CENTRAL DIVISION.

116. Since the formation of the Deccan Irrigation Division, the Central Division contains a few irrigation works of importance. The area irrigated on First Class Works was 15,035 acres, being slightly in excess of the average. The assessed revenue, Rs. 1,52,963, was also more than the average.

(i) FIRST CLASS IRRIGATION WORKS.

117. The Ekruk, Ashti and Pathri Tanks and their canal systems in the Sholapur, the Lower Panjhra River Works in the West Khandesh, and the Mhaswa Tank and the Jamda Canals in the East Khandesh Districts constitute the more important of the irrigation works, in the Division. The Ekruk Tank which was, in the first instance, constructed for irrigation purposes only, has, for many years, furnished the town of Sholapur with supplies of water for industrial and domestic purposes.

118. The Jamda Canals in the East Khandesh District forms an important irrigation system, but a drawback is that the river Girna above the Jamda bandhara has a very small cold weather discharge, and unless it is supplemented by a supply from an independent storage work, it is doubtful whether the work can ever be remunerative. At present, the Chankapur Tank in the Nasik District helps the Jamda Canals, as far as possible, but as the Girna Left Bank Canal has the first claim on this storage, it has been decided to encourage on the Jamda Canals 8 months blocks and allow water for sugarcane only to such lands on it as have wells to maintain the crops during the hot weather.

(ii) SECOND CLASS IRRIGATION WORKS.

119. The expenditure on extensions and improvements and maintenance and repairs to the bandharas situated in the Ahmednagar, East and West Khandesh Districts was Rs. 11,153. The area irrigated and the gross revenue assessed were 9,647 acres and Rs. 79,573 respectively.

3.—DECCAN IRRIGATION DIVISION.

(i) FIRST CLASS IRRIGATION WORKS.

(a) Works in existence.

Protective Works.

Nira Left Bank Canal and Shetphal Tank.

120. Of the works in operation, the Nira Left Bank Canal is the largest in the Deccan and is situated in the Poona District.

121. The total area irrigated under this canal during the year 1915-16 is 50,859 acres, yielding a gross revenue of Rs. 5,11,779. This is under the average and the decrease was due to the small demand for rabi crops on account of the favourable late winter rains.

122. Experiments for cultivating sugarcane by the new method in rows 5 feet apart were made in three plots at Baramati and Malad for comparison with the old "Wafa system." The new method was found to have the following advantages, viz., the operation of earthing up can be done by means of bullocks more expeditiously and cheaply than by manual labour, less manure is required, excessive irrigation and consequent deterioration of land is avoided; the same outturn is obtained as under the "Wafa system" with an expenditure of about Rs. 100 per acre less.

123. In order to induce the irrigators to study carefully the advantages of the new method, nearly 200 prominent and intelligent cultivators were taken in parties to the Manjri Farm to see the experiments. Many of these having shown their willingness to try the new method were allowed to cultivate an area of about 200 acres of sugarcane outside of blocks on a one year's lease.

124. *Soil Classification.*—The experimental work of nala clearance and reclamation of salt affected lands was in progress. The experiments consist of the following :—

(1) clearing and deepening nalas so as to make them self-clearing and non-silting.
(2) improving and reclaiming lands affected by water-logging, salt efflorescence, etc.
(3) experimental plantation of useful trees of economic value in lands partially improved.

125. The whole work is still in an experimental stage and about Rs. 5,000 were spent. This work has now been transferred to the Executive Engineer in charge of the new Special Irrigation District.

126. The total area irrigated under this tank during the year is 7,305 acres, yielding a gross revenue of Rs. 40,789. Mhaswad Tank and Canals.

Productive Works:

127. The total area irrigated under this system during the year under report is 11,524 acres, yielding a gross revenue of Rs. 3,71,793. Mutha Canals and Matoba Tank.

128. The revenue realised from the Poona Water Supply amounted to Rs. 1,50,851.

129. Investigations were continued by a special staff to ascertain the causes of the pollution of the water in Lake Fife and to find a remedy for the pollution.

130. A Paterson Filter is being installed at the Poona Water Works, and it will effect a great improvement in the present system of purification of the water. The cost of this plant is Rs. 1,53,700.

131. Data are being collected to enable the Water Supply works to be separated from the Mutha Canal system.

(*b*) *Works under construction.*

132. The Godavari Canals Project comprises the following works :— Godavari Canals.

(1) Lake Beale Storage.
(2) Pick-up weir at Nandur Madhmeshwar.
(3) The Godavari Right and Left Bank Canals.

There was some trouble with the large undersluice gates at Darna. The tank was therefore emptied and it was found that considerable damage had been caused by boulders being forced on to the caging about the sluices. The cage rails were too light and the mortar joints of the masonry had, in some cases, been scoured out. New caging of stout rails and ashlar laid in cement was built in before the arrival of the monsoon floods.

133. *Pick-up weir at Nandur Madhmeshwar.*—The crest has been permanently raised 3 feet by means of a small wall at the upstream edge of the existing weir. This permits of water being raised to 4 feet above the F. S. L. of the canals, and thus allows for an extra storage of 475 million cubic feet and for a fluctuating surface level in this basin.

134. The construction of independent capstan gearing to work the scouring sluices is in progress.

135. *Godavari Right and Left Bank Canals.*—The two canals are now practically completed and the area of irrigation should increase rapidly. The total area irrigated during the year is 18,899 acres yielding a gross revenue of Rs. 1,80,706.

136. The increase in perennial irrigation is satisfactory, whilst that of the rabi is somewhat disappointing, but it is anticipated that, in the future, the irrigated rabi area under the canals will be important. An agricultural instructor has been posted to the Godavari area and he should prove of great value both to Government and the people. Experiments in heavy black soil are being conducted by the Agricultural Department for testing the possibility of growing wheat under irrigation and growing "Pundya" and "Khadya" varieties of sugarcane with different methods of ploughing and manuring. At present there are 14 demonstration plots in cultivators' fields comprising 15 acres where the wide-planting method is being demonstrated.

137. The irrigators under this canal have formed an "Irrigators' Association" and it is hoped by this agency to foster agricultural co-operation and the free discussion of better methods of agriculture and irrigation. Through the medium of this Association not only will first hand information as to the needs and difficulties of the cultivators come to the knowledge of the officers concerned, but the irrigators will become more amenable to the rules and regulations of the Department.

138. The total outlay incurred during the year under report is Rs. 2,13,937 as detailed below :—

	Rs.
Lake Beale Dam	10,230
Godavari Right Bank Canal	1,11,769
Godavari Left Bank Canal	91,938
Total ...	2,13,937

Pravara Canals.

139. This system comprises —

(1) Lake Arthur Hill Storage.

(2) Pick-up weir at Ojhar.

(3) Right and Left Bank Pravara Canals.

The dam was originally designed to be 250 feet high but it is now proposed to make it 270 feet high, increasing the storage from 8,671 million cubic feet to a possible 12,890 million cubic feet. Water will be stored up to 100 feet level this year. The lowest pair of pipes, 3 feet diameter, were laid at R. L. 2,227·63 (50 feet above river bed) with re-inforced concrete protection and the valves were erected. The Ojhar Weir crest has been raised by 18 inches and the weir has been completely strengthened by buttresses.

140. *Pravara Left Bank Canal.*—The new head regulator has been nearly completed, but the canal is still under construction. The old canal was temporarily closed for the work of widening and extension. Water had, however, to be let in for a length of 15 miles on account of unfavourable rainfall during the rabi season, and thus 1,212 acres of crops were saved from withering.

141. The work of widening and extending the old canal was started in 1910. The earthwork of the main canal is almost completed and the construction of masonry works is making satisfactory progress.

142. *Pravara Right Bank Canal.*—The total area irrigated under this canal during the year 1915-16 is 3,694 acres, yielding a gross revenue of Rs. 14,687. The increase in revenue is due to sugarcane.

143. All the works on this canal are completed, including most of the distributaries. The construction of the tail branch and Rahuri distributary is making but slow progress due to scarcity of labour.

144. Most of the land under this canal is particularly well suited for irrigation, and when Lake Arthur Hill dam is completed there will be a marked increase in the area under garden crops and sugarcane.

145. Excellent fruit and flower gardens are being made in the bungalow compounds on both canals ; they yield revenue and at the same time demonstrate the possibility of growing fruit trees, sugarcane and other perennial crops to the neighbouring villages. Special attention is being paid to the plantation of useful and revenue producing trees along the canals.

146. The total expenditure during the year on works was Rs. 6,18,463 as detailed below :—

	Rs.
Lake Arthur Hill Dam	3,75,433
Pravara Left Bank Canal	1,94,108
Pravara Right Bank Canal	48,922
Total ...	6,18,463

Nira Right Bank Canal.

147. This project consists of :—

(1) building a new dam 160 feet high at Lake Whiting,

(2) increasing the capacity of the existing Nira Left Bank Canal ; and

(3) constructing a canal on the Right Bank from Vir upto the Mán River valley for the length of 109 miles.

148. The project was sanctioned in September 1912, and work commenced at once. A revised estimate has been submitted, as an excess of about 25 % is expected on the original figure of Rs. 2,57,72,499.

149. *Bhatghar Dam.*—Most of the excavation for foundations of the new dam has been completed and the foundations have been approved. No bed springs were met with but there is naturally a good deal of percolation especially from the upstream side of the cutting owing to the proximity of the old dam. At the most important part, *viz.*, the river portion, the rock is not so hard and close grained as at other places, but it is a sound solid flow of trap.

150. Masonry has been started at several places between chainages 400 to 5,200 and 1,300,000 cubic feet have been laid. The great difficulty is the scarcity of labour.

151. Before lime burning was commenced, exhaustive trials were made with the lime obtained from Diva and from other depôts. Samples of lime stones were also sent home to Messrs. Henry Faija and Co. Both the experiments and analyses have shown that the Diva lime is sufficiently hydraulic and may safely be used.

152. The construction of the electrical power house has been nearly completed and the electrical plant will be in running in the coming season 1916-17.

153. *Gunjavni Bridge.*—At present the Bhatgar Dam is cut off from access in the monsoon by the Nira River on one side and the Gunjavni River on the other. The Government of India have accorded their administrative approval to the construction of a bridge over the Gunjavni and this is under construction.

154. *Right Bank Canal.*—The canal is designed for 109 miles in length and the command extends up to the Mán River in the Sholapur District, the commanded area being 577,595 acres. The designed discharge at head is to be 1,500 cusecs and the depth of water 8 feet.

155. For the present all the works beyond 80 miles of the canal have been stopped with a view to completing the portion up to mile 79, so as to give water for monsoon irrigation as early as possible. The progress has been good. The labour has been fairly steady and a good number of carts and donkeys were available.

156. The expenditure during the year was Rs. 24,04,905 as detailed below :—

	Rs.
Lake Whiting District	8,02,519
Lonand District	9,03,380
Malsiras District	6,99,006
Total ...	24,04,905

157. The water from the Chankapur Tank is not yet fully utilized. Girna River Works.

158. *Girna Left Bank Canal.*—The total area irrigated under this canal during the year 1915-16 is 1,710 acres, yielding a gross revenue of Rs. 11,773 less than the average. The decrease in the area irrigated was due to timely and copious rainfall in the Girna valley.

159. The extension of the canal is under construction.

(ii) Second Class Irrigation Works.

160. On repairs, extensions and improvements to the bandharas and small village channels, a sum of Rs. 13,935 was spent, being less than usual, due to want of funds.

161. The water-supply for these works was ample on account of timely and copious rainfall and the harvest has been good in general.

4.—SOUTHERN DIVISION.

162. This year again there was a considerable decrease in the area of irrigation in the Southern Division, mainly under the Krishna and Gokak Canals owing to seasonable rainfall. The total assessed revenue showed, however, a very large increase over the previous year as also on the average of the past ten years which was due to more extensive cultivation of sugarcane, principally under the Krishna Canal.

163. The Major and Minor Works of the first class irrigated over 26,000 acres of land, while the numerous second class works in this Division irrigated nearly 75,000 acres.

(i) First Class Irrigation Works.

164. The only Major irrigation work is a small weir and canal system under the Krishna near Karad, south of Satara. Certain improvements to the weir undertaken with a view to enable an extra 4 feet depth of water to be stored, were in progress. The total expenditure on these improvements up to the end of the year under report was Rs. 57,526 against the estimated cost of Rs. 85,226. The gates on the weir crest have still to be put on. Krishna Canal.

165. The most important of the First Class Minor Works in the Division is the Gokak Canal, which consists of a masonry weir across the Ghataprabha River in the Belgaum District and a short length of canal. Gokak Canal.

166. On the weir crest (2,985 feet in length) a temporary wall 2 feet high was constructed, as usual, costing Rs. 1,451, and the additional storage thus obtained proved useful.

167. The area irrigated was hardly more than half the previous 10 years' average, being 4,666 acres.

168. At the request of the Manager of the Spinning Mills at Gokak, instead of the usual 146 cusecs discharge, the daily supply was reduced to 130 cusecs during the 3½ months period ending 3rd May 1915.

169. The lowest water level in the tank was 18 feet above the sill of the sluices. There was thus no failure of supply to the mills. Floods flowed over the weir on the 26th June and the maximum height reached was 3·84 feet over the crest.

170. Compensation for the lands taken up in 1906 for the Gokak Canal Extension was paid in this year, Rs. 1,425.

171. The only other two works taking off direct from rivers without storage are both in the Satara District, the Revari and Chikhli Canals, irrigating 1,000 and 200 acres respectively. Revari and Chikhli Canals.

172. The improvements to the Dharma Canal are still in progress. There was a very good area of irrigation. A revised estimate has been prepared, and the unexpended balance is now Rs. 16,000. Dharma Canal.

173. Of canals furnished with storage works, the three most important are in the Satara District. The Yerla River irrigation works irrigated over 4,000 acres of land yielding a gross revenue of Rs. 17,000. The repairs to the Nehr Tank dam, which had slipped in 1913, were completed at a total cost of Rs. 22,375. Yerla River Irrigation Works, and Nehr Tank.

Maini Tank.

174. The Maini Tank is the second system. It irrigated 1,700 acres with a gross revenue of Rs. 7,100.

Upper Mán River Works.

175. The third system referred to is the Upper Mán River Works with the Pingli Tank as storage. This irrigated about 900 acres, yielding a gross revenue of Rs. 3,600.

Other works.

176. The remaining works are all small tanks mostly in the Dharwar Irrigation District. They irrigated from 100 to 600 acres each.

(ii) Second Class Irrigation Works.

177. Most of the Second Class Irrigation Works are in the Dharwar District and on them depends the success of the important rice cultivation in the hills. During the year repairs to 151 tanks were carried out and the expenditure on them amounted to Rs. 37,600 compared with the previous average of 92,000 rupees.

5.—SCIENTIFIC WORKS.

(a) River Gauging.

178. The gauging of 33 rivers in the Deccan and Gujarat was continued and the expenditure was Rs. 16,306. Before commencing the annual gauging operations, a training class was opened in Poona where practical instruction and demonstrations were given to the old as well as the new gauge karkuns. Ever since the work has been made into a separate sub-divisional charge under a junior Executive Engineer, it has been possible to pay frequent surprise visits to the gauge sites, to inspect the gauges, to check the levels of the gauge plates and to make timely repairs to the gauges, with the consequence that the record of discharges is more reliable than in former years. These figures are published annually by the department. The several rain gauges in the Belgaum and Satara Districts and a river gauge in Kanara District were maintained by the Executive Engineers of those districts.

(b) Experiments on the efficiency of Canals.

179. Another annual publication gives a record of observations for the flow and losses in canal, the quantity of water used for irrigation, and the loss from tanks.

180. Occasional notes are written upon the saturation of earthen dams and the rate of deposit of silt in tank basins for which observations are being made continuously.

A This area is also commanded by the Nira Canal.
* This includes 38½ miles of Branch Canals.
† Revised according to the present condition of work.
(a) Figures given in Statement I-A.
(b) The tank supplies the Girna Left Bank Canal and bandháras below the tank.
(c) The tank supplies the Pálkhed, Ojhar Támbat, and Wadáli Canals and their distributaries as noted in Statement I-A.
(d) Storage available after deducting 508 m. cft. which cannot be used on account of the Poona water-supply.
(e) After deducting silt deposits.
(f) Includes 7·133 commanded by Matoba Tank.
(g) Above lowest foundations.
(h) Above lowest point in river bed.
(i) The catchment area of the drainage channel is 13 square miles in addition.
(j) At provisional F. S. L. R. L. 103·50.
(k) At original F. S. L. 105·00.
(l) The provisional F. S. L. of the Savli Tank is changed from R. L. 100·00 to R. L. 103·50 and so the capacity is increased, as also the area of surface.
(m) Corrected as the F. S. L. is raised by 0·50 feet *i.e.* to R. L. 102·50.
(n) Gauged at the respective Station.
(o) Assumed.
(p) Gauged in the catchment area.
(q) Corrected as found by actual contours.

II-A.

(a) Excluding Irrigation Share of Land Revenue.
(b) Correct balances as now reported by the Revenue Officers in Canal Returns Nos. VI and VII.
(c) Inclusive of assessments shown in Canal Return No. IX.
(d) Excess recovery to be refunded.
(e) Due to excess recovery of Rs. 12 and to collections of Rs. 1,062 out of the Rabi demands for the year 1915-16 being shown in Return No. VII for the year 1915-16.

E. M. COOK,
Accountant General, Bombay.

STATEMENT IV-C.

Statement showing the Financial Results of Irrigation Works in Deccan and Gujarát for the year ended 1915-1916, based on the assessment of the year.

Principal Results and Operations for the year ended 31st March 1916.

	Irrigation Works.	Capital outlay (direct and indirect) to end of year.	Revenue assessed during the year.								Working Expenses, direct and indirect.	Net assessed Revenue of the year.	Percentage on Capital outlay to end of year.
			Direct assessed Revenue.						Indirect Revenue (Land Revenue due to operation of Canal).	Grand Total.

I-E.

Bombay Presidency, excluding Sind, during the year 1915-1916.

Area irrigated per Cubic Foot per Second.				Base to which the Duties of Water are calculated.		Remarks.
Discharged at Head.		Utilized.				
Kharif.	Rabi.	Kharif.	Rabi.	Kharif.	Rabi.	
14	15	16	17	18	19	20
26·94	113·19	44·35	146·92	16th June to 15th October.	16th October to 15th February.	(a) *Pravara Right Bank and Godavari Canals.*—Low duty for kharif was due to the fact that canal discharge was run in excess of irrigational requirements. Extra discharge allowed for silty water to seal up the canals as much as possible to reduce percolation.

...	...	...	...			
15·52	25·00	15·52	25·00	15th June to 14th October.	15th October to 14th February.	These tanks are mostly run for monsoon and rabi irrigation. The discharge from these tanks, if any, during the hot-weather being very small, has been neglected and the duties have been calculated to a base of 4 months only for the reason that if the discharge for hot weather was taken into account the duties would have to be calculated to a base of 8 months which would give greatly vitiated results.
20·71*	0·46	25·89*	0·46			
Not known.	227·46	Not known.	227·46	15th June to 14th October ...	15th October to 14th February.

...	...	...	...			
M.c.ft.	M.c.ft.	M.c.ft.	M.c.ft.			*General.*
...	...	...	...			Note.—As perennial and eight months crops are irrigated during the rabi season to obtain the figures of duty for the rabi season in columns 15 and 17, the areas of perennial and eight months crops irrigated in the rabi season are added to the rabi area in column 4 and the totals so obtained are divided by the figures of rabi discharge in columns 11 and 13. The figures in columns 15 and 17 thus represent areas actually irrigated per cusec.

Eight months	... 172 ,,
Monsoon Kharif	... 93 ,,
Rabi	... 104 ,,
	461 acres

* This includes the area of 245 acres of khari sluices irrigated in 1914-15 and accounted during 1915-16.

† The difference of *quantities* was put into the village tanks for domestic and drinking purposes.

‡ Area under consolidated assessment.

§ Due to good and timely rainfall in kharif season, the cultivators did not require water at all and hence the columns are blank. The kharif area in column 3 was lift irrigation.

													w „ Rates sanctioned for 5 years, *vide* Government Resolution No. A.I.—3962 of 10th April 1913.

Note—(1) For lift irrigation half the ordinary rates are charged.
(2) Double the ordinary rates are charged as penal rates for taking water without permission.
(3) Leakage or percolation rates are the same as ordinary rates.

§ For Sugarcane and Pán gardens double the ordinary rates are charged.

STATEMENT G.

Statement showing Areas and Water-rate Assessments in the Bombay Presidency, excluding Sind, during 1915-1916, according to the system of classification adopted in fixing the Scale of Water-rates.

No.	Name of Works.	Irrigation in Blocks.		Perennial.		8 Months.		Monsoon—4 Months.		Rabi—4 Months.		Hot Weather.		Miscellaneous.		Grand Total.		Remarks.
		Areas.	Assessment.	Areas.	Assessment.	Areas.	Assessment.	Areas.	Assessment.	Areas.	Assessment.	Areas.	Assessment.	Areas.	Assessment.	Areas.	Assessment.

Note.—The difference between the figures of total areas and assessments in this statement and those in Statements I—E to IV—E is due to difference in treatment of fractions in some cases, and in others to the fact that the figures in this statement are more or less hypothetical and are arrived at on the assumption that certain areas are assessed at certain rates.

‡ This includes 142 acres for which water was given to sugarcane in different seasons.

§ Rs. 3 in kharif have had to be remitted as free grants owing to water rate on account of Bheja (percolation) formerly assessed.

¶ Exclusive of 1,812 acres of Mamul Bágáyat area on the Lower Pánjhra River Works.

‖ Exclusive of Rs. 8,352 on account of enhanced water-rate on old works of the Lower Pánjhra River Works.
